

IN THE ABSTRACT:

Please amend the abstract as follows:

~~The~~ A ~~device of the invention comprises including an~~
oscillator circuit ~~(11) fitted with having~~ semiconducting logic
elements and further ~~switching means (112) such as switches for~~
controlling ~~startup or shutdown~~ warming and cooling of said ~~the~~
circuit and, in that process, causing it to heat or cool in
order to generate a random signal at the output of said ~~the~~
logic elements. ~~In order to attain~~ A plurality of devices are
for continuously generating random signals continuously, several
~~such devices, and furthermore sub-assemblies (21, 22) to~~
~~control, and control elements are for controlling in alternating~~
~~manner their heating and cooling are used~~ the warming and
cooling of the devices.
